 AB The syntheses and anti-inflammatory activities of novel thieno[2,3-b]pyridine and thieno[2,3-b: 5,4-c']dipyridine derivs. are described. These compds. were designed by modification of the quinoline template of a new type of disease-modifying antirheumatic drug (DMARD), TAK-603, and prepared by the Friedlander reaction as a key reaction. Their anti-inflammatory effects were evaluated using an adjuvant arthritis rat model. Most of the compds. which included a diethylamino moiety in the side chain had potent anti-inflammatory effect. In particular, Et 2-(diethylaminomethyl)-4-(3,4-dimethoxyphenyl)thieno[2,3-b: 5,4-c']dipyridine-3-carboxylate exhibited more potent activity than TAK-603.

AB This invention pertains to prepn method of thienopyridine derivs. I and II [wherein G = halo, OH, (un)substituted amino, alkyl, or alkoxy; X = (un)substituted alkylenyl; n = 2-4; ring A = (un)substituted Ph; ring B = (un)substituted 5-8 membered ring without a nitrogen atom] and salts thereof. For example, compound III was prepared in a multi-step synthesis comprising a ring closure reaction in good yield. I are useful as antiinflammatory agents for inhibition of bone resorption and production of cytokine (do data). Formulations containing I as an active ingredient were also described.
